OMER FARUK TUREGUN

Full-Stack Software Developer

Izmit / Kocaeli, Turkey | trkuraf@gmail.com | (+90) 538 603 22 71 | linkedin.com/in/omer-farukturegun6360532b6 | github.com/OmerTuregun

ABOUT

I hold a degree in Computer Engineering from Kocaeli University. I'm continuing my career as a Software Engineer at Mina AI Solutions, part of Bilişim Vadisi. My focus is on building AI-driven solutions, launching new processes and projects, and staying consistently productive as I work toward becoming one of Turkey's leading names in the field. I'm a driven person who likes to be involved in a process from start to finish, stay attentive to every detail along the way, and keep pushing myself toward the goals I set. Alongside my main role, I also design independent web projects and AI-based workflow tracking applications for people close to me on request. Outside of software development, I enjoy staying active through sports, visiting historical places, and photography.

SKILLS

Languages & Frameworks: C#, .NET, Node.js, Python, JavaScript, TypeScript, React
Databases: MSSQL, PostgreSQL, MySQL, MongoDB
DevOps & Tools: Docker, Linux (Ubuntu), Git/GitHub, GitHub Actions (CI/CD)
AI & Data Science: Machine Learning, Deep Learning, Natural Language Processing, Computer Vision (YOLO, OpenCV)

WORK EXPERIENCE

Software Engineer — Mina AI Solutions (Mina Yapay Zeka Çözümleri) *11.2026 – Present*

- Develop end-to-end AI solutions tailored to client needs at a company providing AI consulting to businesses.
- Build computer vision systems for defect detection and person recognition.
- Design and deliver AI-powered chatbot solutions for client companies.

Assistant Software Development Specialist — Uzer Makina ve Kalıp Sanayii A.Ş. *01.2026 – 09.2026*

- Developed web platforms for digitizing, remotely managing, and reporting on factory-floor machinery.
- Built backend services with C# / ASP.NET Core MVC and Node.js, managed databases with MSSQL, and developed interfaces with JavaScript/HTML/CSS.
- Handled containerization with Docker and version control with GitHub; carried out performance optimizations and new module development.

Contract Software Developer (Full-Stack) — KOLSAN (Kolsan Kocaeli Lastik Sanayi A.Ş.) *10.2025 – 12.2025*

- Developed web platforms for digitizing and reporting on factory-floor machinery using C#, ASP.NET Core MVC, and Node.js.

K-Team Talent Program Participant — Assan Bilisim *07.2024 – 06.2025*

- Gained experience with Linux-based system architecture and Docker by working on Jetson devices; contributed actively to computer-vision projects both on-site and in the office.
- Built full-stack skills by developing web interfaces with React and building database queries with Python and MongoDB.
- Actively used terminal commands to access virtual servers and remote devices.

PROJECTS

Bilişim Postası (bilisimpostasi.com.tr) *08.2026 – Present*

An automated content platform powered by an n8n + Claude API AI agent pipeline that collects, summarizes, translates, and publishes tech/AI news bilingually (TR/EN). Built with an Astro static site, LibreTranslate, and Umami analytics; deployed to a VPS with Docker.

Personal Portfolio Website (omerfarukturegun.com.tr) *10.2025 – 11.2025*

A personal portfolio site showcasing my projects and experience. Built with ASP.NET Core MVC, Bootstrap 5, and vanilla JavaScript; containerized with Docker.

Rate My Professor (hocaniyorumla.com.tr) *02.2026 – 07.2026*

An anonymous rating and review platform for university professors, with content moderation to protect community safety. Built with ASP.NET Core (.NET 10), PostgreSQL, and React.

UTARGET — Process KPI & Goal Tracking System *11.2025 – 02.2026*

A hierarchical performance management system for tracking organizations' process KPIs and goals. Built with Node.js (Express) and MySQL; deployed to production with JWT authentication and Docker.

PREDICO — Predictive Maintenance Tracking System *10.2025 – 11.2025*

A maintenance management system that digitizes industrial machine maintenance workflows. Built with Node.js (Express) and MySQL; includes JWT authentication, PDF reporting, and Docker deployment.

VisitPass — Construction Site Access Management System *05.2026 – 06.2026*
A role-based, multi-user system managing the document/approval workflow for contractor companies and staff entering a construction site. Built with PHP and MySQL; deployed with Docker.

IOT-D — Quality Data Module & Reports
A module for tracking tire quality data (measurements, limit checks, production counts) and generating daily/summary reports. Built with ASP.NET Core MVC.

KIBAREYE — AI-Powered Factory Safety System *07.2024 – 06.2025*
Contributed to a factory safety system that detects human presence via Jetson-based cameras to prevent workplace accidents. Built with Python/FastAPI and React; real-time data streaming via WebSocket.

Social Media Content Moderation System *01.2025 – 06.2025*
Co-developed a social media feature letting users choose which types of visual content they find uncomfortable; selected content is detected and censored in real time.

LIVA Five-a-Side Football Tournament — Tournament Management Platform *04.2026 – 05.2026*
Organized a five-a-side football tournament with 12 teams and 117 players, and built its entire digital infrastructure from scratch. Built with React/TypeScript, ASP.NET Core 8, and PostgreSQL; deployed to an Ubuntu VPS with Docker.

EDUCATION

B.Sc. Computer Engineering (Graduate) — Kocaeli University *2021 – 2026*

Web Design and Coding (Distance Education) — Anadolu University *2025 – Present*

CERTIFICATIONS

Artificial Intelligence Bootcamp Certificate — Pupilica, 2025 | FrontEnd Developer Certificate — BT Academy, 2024
Advanced Python Training Certificate — BT Academy, 2025 | Linux Workshop Certificate — Techcareer.net, 2025

LANGUAGES

English — B1
